

INVISIBLE INFLAMMATION

WHAT IS IT AND WHY IS IT AN ISSUE?

- It is inflammation you **CAN'T** see on scans, in blood tests, etc. It can take **10-20 years** for the body to show signs of breaking down.
- It slowly causes the body to breakdown and leads to muscle dysfunction, organ dysfunction, arthritis, osteoarthritis, autoimmune disorders, heart disease, etc. I would go as far to say that it the cause of most health complaints.

HOW WOULD YOU KNOW YOU HAVE IT?

- Bloating and gas
- Burping
- Burning skin
- Dark circles, bags under eyes
- Diarrhea
- Constipation
- Cramping
- Joint pain, stiffness
- Muscle spasms
- Fatigue
- Memory problems
- Rash, acne, hives
- Scaly rough skin
- Cough or sore throat
- Stuffy or runny nose
- Loss of appetite
- Fever
- Headaches
- Oedema, water retention, puffyness
- Cellulite
- and many more!

HOW IS THE BODY IMPACTED?

- Slowly breaks down muscle and tissues
- Spreads throughout the nervous system, leading to organ dysfunction, muscle disfunction, etc.
- Chronic pain
- Brain fog and loss of memory
- Fatigue and sleep issues
- Poor immunity
- Abnormal pain sensations
- After 10-20years – leads to organ failure, disease, cancer

IS THERE A WAY TO REMOVE THE INFLAMMATION?

Practitioners trained in Amino Therapy are trained to find inflammation in the body

- It is one of the cornerstones of the theoretical training as the first stage of the therapy is ALWAYS to remove the systemic (ie all over inflammation) and then second stage is to remove the local inflammation (ie where it hurts).

How to remove the inflammation is through the application of specific discs that work on removing the inflammation.

Once the inflammation is removed, the practitioner can work through rehabilitation exercises and improvements in body function
